Report Notes:

- Movements are the sum of Arrival and Circuits multiplied by 2, i.e. (A + C) x 2.
- Circuits are counted against the arrival airport.
- Arrival data is only recorded during hours of tower operation. Actual movements at non H24 locations may be higher than published.
- Movements at each Port reflect movements at times local to that Port. A conversion from UTC time has taken place on production of the report.
- Data is correct as the report run date. Changes to the data may occur as a result of checks and validations.
- Services for Hobart and Cambridge airports are provided by the one Air Traffic Services facility. Therefore when considering statistics for ATS purposes, movements for both airports should be considered.
- Data Source: Eurocat air traffic control system, Tower flight strips and Tower running sheets.
- Recreational Aviation (RA) movements at airports are not included in overall statistics.
