INTRODUCTION

1. **PURPOSE**

Designated Airspace Handbook is a publication issued on an alternating approximate 24/28 week cycle. The DAH lists, in tabular form, the lateral and vertical limits and other pertinent details of the airspace types listed in the table of contents.

Further information is contained in *AIP* and *MATS Chapter 2-4*. The boundaries of Search and Rescue Areas can be found in *AIP GEN 3.6*.For ATC management purposes further information is contained in MATS Supplementary Procedures or Local Orders/Instructions.

2. **CONDITION FOR RESTRICTED AREAS**

An aircraft may only be flown in the airspace of a restricted area if the pilot in command has approval for the flight from the Controlling Authority mentioned for the restricted area.

3. **NOTAM**

NOTAM are used to disseminate urgent changes to information contained in the DAH. Consult current NOTAM for latest information.

4. **VERTICAL LIMITS / HOURS OF OPERATION**

Except when stated as AGL (above ground level), Lower and Upper vertical limits are promulgated as Above Mean Sea Level when at or below the Transition Altitude or as a flight level when above the Transition Altitude.

SFC means the surface of the ground or water.

NOTAM indicates that the vertical limits will be notified by NOTAM.

The following codes apply for Hours of Operation:

DLY	Daily
EXC PH	Except Public Holidays
FRI	Friday
H24	Continuous day and night service
HDS	Hours of Daylight Saving
HJ	Sunrise to Sunset
HN	Sunset to Sunrise
HO	Service Available to meet Operational Requirements
JF	SAT, SUN and Public Holidays
JO	Monday to Friday (EXC PH)
MON	Monday
OT	Other Times
PH	Public Holidays
SAT	Saturday
SUN	Sunday
THU	Thursday
TUE	Tuesday
WED	Wednesday
Z	Universal Coordinated Time

Hours of operation referring to public holidays refers only to National holidays as listed at *AIP GEN 2.1 para 4.1*. Any other holidays affecting activation will be specified by NOTAM.

5. Airspace descriptions will be preceded by a FIR identifier. These identifiers are as follows:
Brisbane YBBB
Melbourne YMMM

6. To reduce clutter, the following areas are not shown on Airservices charts because of:

a) infrequent activation, or low level Oceanic area.
b) the areas are wholly contained within Controlled Airspace.
YBBB/R 725 - SAUMAREZ REEF

7. Under each FIR a restricted area number has been reserved for Air Defence Identification Zones (ADIZ) purposes. Procedures relating to the introduction of these Zones are contained in Flight Information Handbook Australia (FIHA).

8. Control areas are normally active continuously, but areas depicted may cease to be operative in certain circumstances. Areas identified by the word NOTAM may be activated or additional areas may be established to meet temporary requirements. These changes will be advised by NOTAM or specified on radio navigation charts, but pilots should plan their action on the basis that the depicted control areas are operative unless advised to the contrary.

9. In accordance with the provisions of civil aviation legislation, aircraft operating in military CTR, whether active or deactivated, are not to use the surface of any military airfield unless specifically approved by the relevant military authority.

10. All CTR are active only during the hours of operation of the control tower.

11. Due to the possible variation of the hours of operation of civil and military towers, pilots should plan their operations on the basis that control zones are active unless advised to the contrary.

12. **ADVICE OF ERRORS AND SUGGESTIONS**

Correction and error advice is requested by the following methods (in order of preference):

a) Email at docs.amend@airservicesaustralia.com
b) Mail:

SPECIAL NOTICES

The geographical coordinates published in the Designated Airspace Handbook (DAH) conform to formatting requirements of ICAO Annex 15 and Doc 8126:

- Latitude is given first, presented as DDMM[SS.s]H where DD denotes degrees; MM denotes minutes; SS denotes seconds; s denotes tenths or hundredths of seconds; and H denotes hemisphere, N for North or S for South. Two digits are used in expressing values of less than 10 degrees of latitude;
- Longitude is presented as DDDMM[SS.s]H where DDD denotes degrees; MM denotes minutes; SS denotes seconds; s denotes tenths or hundredths of seconds; and H denotes hemisphere, W for West or E for East. Three digits are used in expressing values of less than 100 degrees of longitude;
- Symbols for degrees, minutes or seconds are omitted;
- The resolution used for geographical coordinates conforms with the aeronautical data quality requirements listed in ICAO Annex 15 Appendix 7;
- Where a degree of accuracy of decimals of seconds is required, the number of decimal places is always consistent within the set;
- The points defining lateral limits of an irregular shape are listed in clockwise order separated by a hyphen “–”. The last point on the list is the same as the first point.
- A circular shape area is defined by the word “radius” followed by the value of the radius in nautical miles (NM), followed by the words “centre”, followed by coordinates of the centre of the circle.

Examples

Hundredths of a Second

The most stringent ICAO accuracy requires some geographical coordinates to be given in hundredths of a second. Thus, the delineation of five degrees, seven minutes and twenty-one point two-zero seconds South, sixty-five degrees, twenty-five minutes and twenty-two point six-two seconds East will be presented as: 050721.20S 0652522.62E.

Tenth of a Second

Should the above example be required to an accuracy of one tenth of a second, it will be presented as: 050721.2S 0652522.6E.

Seconds

Should the above example be required to an accuracy of one second, it will be presented as: 050721S 0652523E.

Minutes

Should the above example be required to an accuracy of one minute (i.e. 1NM) it will be presented as: 0507S 06525E.

SECTION 13 – SPECIAL USE AIRSPACE

AIRSPACE NAME

Airspace is named according to the general commonly known geographic region, e.g. **R237 WOOMERA**.
Where a more specific name is required, that name will be placed after the regional name in brackets, e.g. **R736 TOWNSVILLE (STAR)**, where "Star" is the name of a property in that region.

SPECIAL USE AIRSPACE (SUA) CONTACT DETAILS

Refer ERSA for all SUA contact phone numbers.

RESTRICTED AREA (RA) STATUS LEGEND

Conditional RA Status

In order to assist with shared use of airspace, all restricted areas have been allocated an 'RA Status'. This status will give an indication as to the likelihood of obtaining a clearance to fly through restricted airspace. NOTAM may be issued to indicate changes to the RA Status; which should be checked prior to flight planning.

Conditional RA1: Pilots may flight plan through the Restricted Area and under normal circumstances expect a clearance from ATC.

Conditional RA2: Pilots must not flight plan through the Restricted Area unless on a route specified in ERSA GEN FPR or under agreement with the Controlling Authority, however a clearance from ATC is not assured. Other tracking may be offered through the Restricted Area on a tactical basis.

Conditional RA3: Pilots must not flight plan through the Restricted Area and clearances will not be available.

MILITARY OPERATING AREAS

MOA are a subset of Danger Areas. They are primarily established outside Australian territory in Australian-administered airspace for use by the Australian Defence Force for military training and exercises. Outside Australian territory, only Australian aircraft are restricted from entering MOA unless they have Administering Authority approval. Within Australian territory, both foreign registered and Australian aircraft are restricted from entering MOA unless they have Administering Authority approval. It is highly recommended that foreign registered aircraft make appropriate safety contact with the relevant Administering Authority if they choose to enter an active MOA outside Australian territory.

SECTION 23 – AIR ROUTES

ROUTE LOWEST SAFE ALTITUDES

Continental route segment LSALT published in this section are **only** valid for RNP 2 operations. For operations other than RNP 2 operations, operators and pilots must use a pilot calculated route LSALT or grid LSALT.

ROUTE DESIGNATORS

REGIONAL ROUTES - A, B, G & R.
REGIONAL ROUTES (TASMAN) - L, M, N, P
DOMESTIC ROUTES - H (ONE WAY) & J (TWO WAY)
DOMESTIC ROUTES - V (ONE WAY) & W (TWO WAY) Predominantly Low Level
DOMESTIC ROUTES - Q (180° - 359°), Y (360° - 179°), T (TWO WAY) & Z (LOW LEVEL)

Displayed Below	Charts	Depiction	Explanation
	1	■	No report required
	2	▲	Compulsory position report for all ACFT;
	3	△	Compulsory position report for all ACFT with TAS Less than 300KT, and for other ACFT on request;
	4	◮	Compulsory position report for all ACFT with AIREP section 3 required for designated flights;
	5	◬	In Addition to 3 above, AIREP section 3 required from designated flights.

ROUTE LEGENDS Charts
T/W Two Way
O/W One Way
LIMITED SEG Route charted on ERC(L) charts, however Limited segments, particularly in TAC coverage, are required for high Level operations.

For each Route Segment:

H = Displayed on High Charts
L = Displayed on Low Charts
B = Displayed on Both High and Low Charts therefore able to be Flight Planned at all Levels
