For a complete preflight briefing

A preflight briefing is only **complete** when you have the latest **MET information and all current NOTAM**. NOTAM must include Head Office, FIR, airspace, departure, en route, destination and alternate locations. The GEN section of ERSA lists all AVFAX MET products.

Notes on using AVFAX

Briefing/QNH Areas are identified on Planning Chart Australia. FIRs are identified on En route Charts.

The Group codes shown on these pages give location, FIR, airspace NOTAM with the area and location MET and SIGMET within the area. Location NOTAM older than 7 days will appear as 1 line summaries.

To obtain more specific AVFAX information, refer to the GEN section of ERSA.

Groups of AVFAX product codes can be combined into single custom codes. If you fly the same route regularly, a single custom code can replace multiple standard codes. NAIPS Internet Service users can create and manage a custom code online using their NAIPS account. Alternatively, contact the AVFAX Help Desk 02 6268 5065^
Fax: 02 6268 5044, for assistance.

A faster method of keying product codes into AVFAX is to use the Fast Access Mode. This procedure is described in the GEN section of ERSA.

Canceling an AVFAX request:

Your request will be cancelled if you hang up at any time before hearing the final "Thank You" response.

To update an AVFAX briefing

To receive an AVFAX update, use the NAIPS Internet Service or telephone a **Briefing Officer** on **1800 805 150**^. In each case you will need the Briefing Reference Number printed at the beginning of each AVFAX briefing. Updates from a Briefing Officer can be given over the phone or sent by Fax.

When Fax and phone are not available, call Flightwatch by HF radio, ask for an AVFAX update and quote the Briefing Reference Number.

AVFAX update is not readily available from ATC on VHF.
