Sunshine Coast Airport
Preliminary Sampling

October 2017

Table of contents

Table index

Appendices

List of abbreviations

General terms	
AFFF	Aqueous Film Forming Foam
AHD	Australian Height Datum
ANZECC	Australian and New Zealand Environment and Conservation Council
ARFF	Aviation Rescue and Fire Fighting
bgl	Below ground level
CSM	Conceptual Site Model
DBYD	Dial Before You Dig
DO	Dissolved Oxygen
DQI	Data Quality Indicator
EC	Electrical Conductivity
EISL	Ecological Interim Screening Level
HISL	Human Health Interim Screening Level
HBSC	Health-based Screening Criteria
HSE	Health, Safety and Environment
ISL	Interim Screening Level
JSEA	Job Safety and Environmental Assessment
LOR	Limit of Reporting
NATA	National Association of Testing Authorities
NDD	Non Destructive Drilling
NEPC	National Environment Protection Council
NEPM	National Environment Protection Measure
PFASs	Per- and poly- fluorinated alkyl substances
PFOS	Perfluorooctane sulfonate
PFOA	Perfluorooctanoic acid
PSD	Particle Size Distribution
QA	Quality Assurance
QC	Quality Control
RPD	Relative Percentage Difference
SAQP	Sampling Analysis and Quality Plan
SWL	Standing Water Level
TDS	Total Dissolved Solids
ToC	Top of Casing
TOC	Total Organic Carbon
WHS	Work Health and Safety

Units	
ha	Hectare
L	Litre
km	Kilometre
m	Metre
m^2	square metres
mg/L	milligrams per litre
mbgl	metres below ground level
mg/kg	milligrams per kilogram
mbToC	metres below top of casing
mV	milli-Volt
µg/L	micrograms per litre
µS/cm	micro-Siemens per centimetre

1. Introduction

Airservices Australia (Airservices) engaged GHD Pty Ltd (GHD) to complete a preliminary site investigation (PSI) (GHD, 2016a) for the Sunshine Coast Airport (SCA) (herein referred as 'the site').

A Sample Analysis and Quality Plan (SAQP) was subsequently prepared by GHD (GHD, 2016b) for a targeted Preliminary Sampling program which focused on the assessment of potential contamination from the historical use of Aqueous Film Forming Foams (AFFF).

This report documents the methodology and findings of the Preliminary Sampling and provides supporting information to the PSI. The Site locality and investigation area are shown in Figure 1 of Appendix A.

This report is subject to, and must be read in conjunction with, the limitations set out in Section 1.4. The report should also be read with reference to the PSI which contains further interpretation of the data, including a conceptual site model (CSM).

1.1 Objective of the preliminary sampling

The objective of the Preliminary Sampling was to validate and further investigate the desktop findings of the PSI through a preliminary and targeted soil, groundwater and surface water sampling program.

1.2 Scope of works

Based on the outcomes of the PSI, a Sampling Analysis and Quality Plan (SAQP) was developed for the investigation (GHD, 2016b).

The SAQP was prepared so that the field investigations and analyses were undertaken in a way that enabled the collection and reporting of reliable data on which to base any further soil, groundwater and surface water monitoring programs for specific areas of the site.

The GHD SAQP described drilling methods, sampling equipment, well development strategy, sample collection protocols, sample processing, field and laboratory sample analysis, equipment decontamination and quality-assurance and quality-control (QA / QC) procedures.

The scope of the Preliminary Sampling was as follows:

- Development of a Site Work Program including a Health Safety & Environment (HSE) Plan, and review of underground services plans and site plans
- Liaison and coordination of fieldwork with subcontractors, Airservices and SCA Pty Ltd
- Clearance of all sample locations by a Services Locator
- Drilling of soil bores GW01 to GW06 to a maximum depth of 4.0 metres below ground level (mbgl) and conversion of the bores to groundwater monitoring wells
- Collection of soil samples from soil boreholes at depths of 0.2, 0.5 and 1.0 mbgl and then every metre thereafter, with additional samples collected at any changes in the lithology, to a maximum depth of 4.5 mbgl
- Collection of six targeted surface soil samples (SS1 to SS6)
- Collection of four surface water samples (SW01 to SW04)
- Laboratory analysis of collected samples at Australian Laboratory Services (ALS) Environmental (primary lab) and Eurofins MGT (secondary lab)

- Gauging of six newly installed monitoring wells using an oil/water interface probe to measure the depth to groundwater
- Groundwater sampling of six newly installed monitoring wells using low flow sampling techniques
- Collection of QA / QC samples for soil, surface water and groundwater including “Blind” and “Split” duplicate samples
- Laboratory analysis of soil, surface water and groundwater samples by ALS Environmental (primary laboratory) and Eurofins MGT (secondary laboratory)
- Collection of QA / QC samples for soil, surface water and groundwater including Duplicate and Split samples
- Placement of all soil cuttings and purged groundwater in drums for storage and off-site disposal to a licensed facility
- Preparation of this Preliminary Sampling Report

1.3 Methodology references

This Preliminary Sampling report was undertaken with reference to the following:

- *Airports Act*, 1996
- *Airports (Environment Protection) Regulations* 1997
- Australian Standard AS 4482.1,2005. *Guide to the investigation and sampling of sites with potentially contaminated soil - Part 1: Non-volatile and semi-volatile compounds*
- Australian/New Zealand Standard (AS/NZ) 5667.1,1998. *Water Quality – Sampling. Standards Australia*
- *Environmental Protection Act* 1994 (EP Act)
- GHD, 2015. *Airservices Australia, Managing PFC Contamination at Airports, Interim Contamination Management Strategy and Decision Framework* (GHD Reference 31\32279\239419)
- GHD, 2016b. *Airservices Australia, Sunshine Coast Airport Sampling Analysis and Quality Plan* (GHD reference 31\34071\252996)
- GHD, 2017: PFAS Investigations – Derivation of soil and water criteria
- National Environment Protection Council (NEPC), *National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended by the National Environment Protection (Assessment of Site Contamination) Amendment Measure 2013 No. 1* (the ASC NEPM).

1.4 Limitations

This report has been prepared by GHD for Airservices Australia and may only be used and relied on by Airservices Australia for the purpose agreed between GHD and Airservices Australia as set out in Section 1 of this report. Reliance of other parties on this report is subject to agreement in writing by GHD.

GHD otherwise disclaims responsibility to any person other than Airservices Australia arising in connection with this report. GHD also excludes implied warranties and conditions, to the extent legally permissible.

The services undertaken by GHD in connection with preparing this report were limited to those specifically detailed in the report and are subject to the scope limitations set out in the report.

The opinions, conclusions and any recommendations in this report are based on conditions encountered and information reviewed at the date of preparation of the report. GHD has no responsibility or obligation to update this report to account for events or changes occurring subsequent to the date that the report was prepared.

GHD has prepared this report, partly on the basis of information provided by Airservices Australia, which GHD has not independently verified or checked beyond the agreed scope of work. GHD does not accept liability in connection with such unverified information, including errors and omissions in the report which were caused by errors or omissions in that information.

The opinions, conclusions and any recommendations in this report are based on information obtained from, and testing undertaken at or in connection with, specific sample points. Site conditions at other parts of the site may be different from the site conditions found at the specific sample points.

Investigations undertaken in respect of this report are constrained by the particular site conditions, such as the location of buildings, services and vegetation. As a result, not all relevant site features and conditions may have been identified in this report.

GHD has considered and/or tested for only those chemicals specifically referred to in this Report and makes no statement or representation as to the existence (or otherwise) of any other chemicals.

Site conditions (including the presence of hazardous substances and/or site contamination) may change after the date of this Report. GHD does not accept responsibility arising from, or in connection with, any change to the site conditions. GHD is also not responsible for updating this report if the site conditions change.

These Limitations should be read in conjunction with the entire Report and no excerpts are taken to be representative of the findings of this Report.

2. Field investigations

2.1 Fieldwork methodology

2.1.1 Fieldwork program

The fieldwork program completed by GHD for the site is summarised in Table 1. It included the following:

- Drilling and installation of six groundwater monitoring wells to maximum 4.5 mbgl
- Collection of six surface soil samples at targeted locations
- Collection of four surface water samples from open drains on site
- Gauging and sampling of the six new groundwater monitoring wells

The sampling locations are shown in Figure 2 of Appendix A.

Table 1 Summary of fieldwork program

Date	Activity
15 November 2016	Underground services location Collection of surface soil samples SS1, SS2 and SS6 Collection of surface water samples SW01 – SW04
16 – 17 November 2016	Drilling, sampling and conversion into groundwater monitoring wells for GW01 to GW06 Development of newly installed groundwater monitoring wells.
29 November 2016	Gauging and sampling of all groundwater monitoring wells (Refer to Section 2.3). Surveying of the six newly installed monitoring wells.

2.1.2 Soil investigation

The soil sampling methodology is summarised in Table 2.

Table 2 Soil sampling methodology

Activity	Details
Underground services locating	A Telstra-accredited independent contractor cleared underground services using radio-detection and ground penetrating radar with reference to utility plans provided by Dial Before You Dig (DBYD), prior to any sub-surface works being undertaken[1]
Sampling plan design	The objectives and rationale of the sampling locations were detailed in the SAQP (GHDb, 2016).
Soil borehole drilling	For the six soil borehole sampling locations (GW01 to GW06) non-destructive drilling (NDD) was undertaken to a depth of 1.5 mbgl to assist with clearance of underground services. Boreholes were then advanced with hollow-stem auger to a depth of 3.1 to 4.5 mbgl for the purpose of installing the six groundwater monitoring wells. Decontamination of the hollow flight auger was undertaken between each sampling location in accordance with the decontamination methodology outlined in the SAQP.

[1] Site plans have been sought from SCA, however, was not available at the time of service locating.

Activity	Details
Soil bore sampling	Soil samples were collected from each of the soil boreholes generally at the surface, 0.2 mbgl, 0.5 mbgl and 1 mbgl, and then at approximately 1 m intervals to a maximum depth of 5 m or where changes in lithology or potential contamination were observed, unless soil samples were too saturated to be recovered from the drilling. Soil samples were placed into laboratory-supplied glass and plastic jars. A total of 38 soil samples were collected. Two QA/QC samples were collected (QA-04 and QA-05). The records of the soils encountered, and the samples collected (including depths and related observations) are presented in the borehole records (Appendix B) and Laboratory reports (Appendix H). Samples were identified with a unique label, incorporating the sample location and depth (i.e. GW01-0.2 was collected from borehole GW01 at a depth of 0.2 mbgl). Care was taken during the sampling to obtain representative samples from each target level.
Surface soil samples	Six surface samples (SS1-SS6) were collected from the site. One QA sample (QA01) was collected. Description of samples collected are provided in Appendix E. The surface soil samples were collected by mattock and placed into laboratory-supplied jars/containers. Sampling implements were decontaminated between sampling locations in accordance with the decontamination methodology outlined in the SAQP.
Soil logging	Soils encountered during drilling were described and logged by an environmental scientist. Borehole logs are presented in Appendix B.
QA/QC	Three quality control samples (QA-01, QA-04 and QA-05) were collected including two intra-laboratory (“blind”) samples and one inter-laboratory (“split”) sample. Refer to Appendix G for more details.
Sample preservation and transport	Samples were chilled upon collection, stored on ice in an insulated cooler box while on site and in transit to the laboratory. Samples were transferred to the laboratory under Chain of Custody (COC) documentation. COC documentation is presented in Appendix H.
Soil cuttings	NDD waste and soil cuttings from drilling activities were contained in 205 L sealed drums and placed at the current fire station for disposal off site to a licensed facility. Disposal documentation is included in Appendix J.

2.2 Groundwater monitoring and sampling methodology

2.2.1 Groundwater well installation

Soil bores were converted to groundwater monitoring wells as detailed in Table 3. Locations are shown in Figure 2 in Appendix A. Well construction details are provided in the bore logs contained in Appendix C.

Groundwater well GW04 was re-located to the southern end of the main runway during installation as the initial proposed location in the SAQP (GHD, 2016[b]) is within the new runway construction footprint (as advised by SCA).

Table 3 Groundwater well installation

Activity	Details
Well construction	The monitoring wells were installed in accordance with the *Minimum Construction Requirements for Water Bores in Australia, Edition 3* (2012) and were constructed using 50 mm ID uPVC, Class 18, acid washed threaded standpipe with machine slotted (0.4 mm) screened section. Graded and washed filter sand was installed in and slightly above (0.2 m) the screened interval, then a bentonite seal (0.5 m thick) and grout to the surface. Screened and installation depths varied according to strata, identified conductive horizons, areas of potential contamination and the need to minimise the risk of cross contamination between soil horizons/ units. Most wells were completed with a standpipe monument except for GW06, which was completed at the surface with a flush mounted gatic cover concreted below the ground surface. Details of the monitoring wells construction were provided in the borehole logs in Appendix B.
Well survey	The top of the well casings were surveyed to Australian Height Datum (AHD). In the instance where the top of casing was not evenly cut, the highest point of the top of casing was surveyed. The survey data (with reference level at top of casing) is presented in Appendix C.
Well development	The newly installed wells were developed following construction by the air-lifting method using an air compressor. The air compressor had an air filter so no hydrocarbons were introduced into the wells. GHD considers that the development procedure undertaken was adequate to prepare the wells for collection of representative groundwater samples.
Development water disposal	Purged water from the well development was placed into 205 L sealed drums or container and placed at the current fire station for disposal off site to a licensed facility. Disposal documentation is included in Appendix J.

2.3 Groundwater monitoring and sampling methodology

A total of six newly installed monitoring wells (GW01-GW06) were gauged, purged and sampled.

Details of the groundwater monitoring and sampling methodologies are summarised in Table 4.

Table 4 Groundwater monitoring and sampling methodology

Activity	Details
Well gauging	Prior to the sampling of wells, groundwater standing water levels (SWL) were gauged using an interface probe measuring from the top of the bore casing (TOC). Standing water levels were recorded on field record sheets. The gauged groundwater levels for each well at the site are summarised in Appendix D. The calibration certificate of the interface probe is provided in Appendix I.
Groundwater sampling	All monitoring wells were purged and sampled through low-flow sampling methods using a Geopump® peristaltic pump. Groundwater field parameters were monitored during the purging process using a multi-probe water quality meter, reporting temperature, DO, pH, ORP and EC. The calibration certificate of the water quality meter is provided in Appendix I. Groundwater samples were collected directly from the tubing into laboratory-supplied containers (pre-preserved where appropriate) and filled up to minimise headspace. A total of 8 groundwater samples were collected [including two quality assurance (QA)/quality control (QC) samples (QA01, QA02)]. All samples were stored on ice in an esky until delivered to the laboratory. Groundwater gauging and sampling records are provided in Appendix D.

Activity	Details
Decontamination	Decontamination of the interface probe was undertaken through a three stage approach. The first stage involved cleaning the equipment using a mixture of pH neutral phosphate free detergent (Decon® Neutracon) in water, followed by a deionised water wash and a final rinse stage Single-use tubing was used for sample collection to minimise potential for cross contamination.
QA/QC	Two quality control samples were collected including one intra-laboratory ("blind") samples and one inter-laboratory ("split") samples. Refer to Appendix G.
Purge water disposal	Purged water from the well development/sampling was placed into 205 L sealed drums or container and placed at the current fire station for disposal off site to a licensed facility. Disposal documentation is included in Appendix J.

2.4 Surface water sampling methodology

The surface water sampling methodology is summarised in Table 5.

Table 5 Surface water sampling methodology

Activity	Details
Sampling plan design	The objectives and rationale of the sampling locations were detailed in the SAQP (GHD, 2016b).
Surface water sampling	Surface water samples were collected from four locations (refer to Figure 2 in Appendix A for the sample locations). A total of six surface water samples [including two quality assurance (QA)/quality control (QC) samples (QA-02, QA-03)] were submitted to the laboratory for analysis. Samples were collected directly from the surface water bodies using laboratory-supplied bottles.
Surface water logging	Field observations and physicochemical parameters (pH, electrical conductivity (EC), dissolved oxygen (DO) and oxidation-reduction potential (ORP)) of the surface water were recorded by an environmental scientist and results presented in Appendix E.
QA/QC	One intra-laboratory ("blind") quality control sample was collected. Refer to Appendix G.
Sample preservation and transport	Samples were chilled upon collection by storing on ice in an insulated cooler box while on site and in transit to the laboratory. Samples were transferred to the laboratory under Chain of Custody (COC) documentation. COC documentation is presented in Appendix H.

2.5 Work health and safety

GHD prepared a project-specific Job Safety and Environmental Analysis (JSEA) for the site works in accordance with Work Health and Safety (WHS) legislation and associated Codes of Practice. The JSEA consisted of a summary of relevant site activities and specific job-related tasks; a hazard register that identifies all foreseeable hazards; risk ranking and risk management measures for each identified hazard; and procedures for monitoring and / or implementing remedial actions to manage all project-based risks. Prior to undertaking the fieldworks, the GHD field representatives and all subcontractors held a pre-start meeting on site. Daily GHD WHS forms were completed before commencement of work each day.

2.6 Laboratory analysis program

2.6.1 Analytical laboratories

GHD consigned all primary soil, water and groundwater samples and intra-laboratory field duplicate (blind) samples to ALS for analysis. The analysis of inter-laboratory duplicate (split) samples, for QC purposes, was completed by Eurofins MGT.

Both the primary and secondary laboratories are National Association of Testing Authorities (NATA) registered for the analytical program undertaken.

Certified laboratory documentation including chain of custody records, sample receipt notifications, certificates of analysis and laboratory QA / QC reports are provided in Appendix H.

2.6.2 Sample analysis

The number of soil, groundwater and surface water samples collected at the site and the scheduled analyses are documented in Table 6. The list of PFASs analysed in the extended suite and their respective abbreviations is provided in Table 7.

Table 6 Laboratory analytical schedule

Sample type	No. primary samples		No. QC samples	Analytical suite
	Collected	Analysed		
Soil				
Soil borehole	38	14	2	PFOS, PFOA, 6:2 FtS, 8:2 FtS + extended PFASs suite Total organic carbon (TOC) Metals [2] Cation exchange capacity (CEC) Particle size distribution (PSD) pH Electrical Conductivity (EC) Potassium
Soil surface	6	6	1	PFOS, PFOA, 6:2 FtS, 8:2 FtS + extended PFASs suite Metals[3] Cation exchange capacity (CEC) pH Total organic carbon (TOC) Potassium
Water

N-Methyl perfluorooctane sulfonamidoethanol	MeFOSE
N-Ethyl perfluorooctane sulfonamidoethanol	EtFOSE
N-Methyl perfluorooctane sulfonamidoacetic acid	MeFOSAA
N-Ethyl perfluorooctane sulfonamidoacetic acid	EtFOSAA
Fluorotelomer Sulfonic Acids	
4:2 Fluorotelomer sulfonic acid	4:2 FTS
6:2 Fluorotelomer sulfonic acid	6:2 FTS
8:2 Fluorotelomer sulfonic acid	8:2 FTS
10:2 Fluorotelomer sulfonic acid	10:2 FTS

3. Assessment criteria

The focus of the Preliminary Sampling is on PFASs which are regarded as the key contaminants of potential concern for the site.

A national consensus has not yet been reached on appropriate investigation levels for PFASs in soil, sediment, groundwater or surface water in Australia. In the interim, use of the following is considered appropriate and has been adopted as the basis for this assessment:

- *Australian Department of Health 2017, Health Based Guidance Values for PFAS – For use in site investigations in Australia*. Human health screening levels were developed by Food Standards Australia New Zealand (FSANZ) on behalf of the Australian Government Department of Health for concentration of PFOS/PFHxS[1] and PFOA in drinking water and recreational water.
- *GHD (2017).* PFAS Investigation – Derivation of PFAS soil and water criteria (GHD Reference 31\34249\256856). Based on the released interim national guidance on PFAS human health toxicity reference values by FSANZ, GHD derived PFAS criteria to be consistent with the FSANZ toxicity review, for use by Airservices.
- *GHD (2015). Airservices Australia, Managing PFC Contamination at Airports, Interim Contamination Management Strategy and Decision Framework* (GHD Reference 31\32279\239419). GHD has developed a set of interim screening levels (ISLs) for use at federally leased airport sites, based on currently available international guidelines. The ISLs include criteria for of soils, sediments, groundwater and surface water to assess protection of human health (HISLs) and ecosystems (EISLs).

The values for the adopted screening / investigation levels from these sources are summarised in Table 8 and Table 9.

Table 8 Adopted PFAS assessment screening criteria for soil/sediment

SOIL			
Exposure Scenario	PFOS	PFOA / 8:2FtS	Source
Ecological interim screening levels (EISLs) (terrestrial)	0.373 mg/kg (95% protection) 0.91 mg/kg (residential, 80% protection, low reliability) 4.71 mg/kg (commercial / industrial, 60% protection, low reliability)	3.73 mg/kg	GHD, 2015 [UK Environmental Agency 2009]
	PFOS + Perfluorohexane sulfonic acid (PFHxS)	PFOA	Source
Health-based screening criteria (HBSC) – Recreational Public Open Space	6.0 mg/kg	48 mg/kg	GHD, 2017
HBSC - Commercial/ Industrial	81 mg/kg	680 mg/kg	GHD, 2017

Table 9 Adopted PFAS assessment screening criteria for surface water and groundwater

SURFACE WATER				
	PFOS	PFOA / 8:2FtS	6:2FtS	Source
EISLs (toxicity effects on aquatic organisms)	6.66 µg/L	2900 µg/L	NA	Qi et al 2011 Giesy et al 2010
	PFOS + PFHxS		PFOA	Source
Human health interim screening levels (HISLs) (consumption of fish)	0.4 ng/L (Freshwater) 1.0 ng/L (marine water)		2.9 ng/L (Freshwater) 8.2 ng/L (marine water)	GHD 2017
Recreational water quality value	0.7 µg/L		5.6 µg/L µg/L	Australian Department of Health 2017
GROUNDWATER				
	PFOS	PFOA / 8:2FtS	6:2FtS	Source
EISLs (toxicity effects on aquatic organisms)	6.66 µg/L	2900 µg/L	NA	Qi et al 2011 Giesy et al 2010
	PFOS + PFHxS		PFOA	Source
Drinking water quality value	0.07 µg/L		0.56 µg/L	Australian Department of Health 2017

In most cases, the assessment of ecological impact will relate to the discharge of groundwater to a surface water, and impact on the aquatic ecosystems of the surface water. When assessing risk to surface waters, consideration should be given to the flux of the chemical in groundwater, the resulting dilution that will occur in the surface water and the existing PFAS concentrations in the surface water. This can then be compared to the surface water screening values above. However, in this case, where the groundwater flux to surface water is not understood, the groundwater results are compared to the adopted assessment screening levels above directly without dilution.

4. Results

The following sections summarise the field observations and analytical results of the Preliminary Sampling. Sample locations are shown in Figure 2 of Appendix A. Interpretation and discussion of the results has been provided in Section 6.

4.1 Soil

4.1.1 Field observations

Soil samples were collected from boreholes and surface soils. The soil field observations are presented in the borehole logs and soil field observations sheets contained in Appendix C and Appendix E.

Soil borelogs typically included soils characterised as sandy material with silt and limited instances of fine gravels, while surface soils were typically characterised as being of silty sand material.

4.1.2 Analytical results

The tabulated analytical results of soil samples are presented in Appendix F and laboratory reports are provided in Appendix H.

Fate and transport indicators

Particle size distribution

Three soil samples were submitted for particle size distribution (PSD) analysis. The samples had a typical sand content of between 82 and 99%, ranging from fine to medium grained, which was generally consistent with observations made in the field.

Physico-chemical parameters

- The total organic carbon (TOC) results of the soil samples ranged from 0.1% (GW06-1.0) to 4.24% (GW02-0.8).
- Cation Exchangeable Capacity (CEC) of the soil samples ranged from 0.2 meq/100g (GW06-1.0) to 8.2 meq/100g (GW02-0.8).

Metals/Metalloids and minerals

The concentrations of most metals in the analysed soil samples were less than or close to the laboratory limit of reporting (LOR), with the exception of the following:

- Aluminium results ranged from < 50 (GW06-1.0) to 4480 mg/kg (SS2)
- Iron concentrations ranged from <50 (GW04-1.0 and GW06-1.0) to 2710 mg/kg (SS2)
- Silica (Silicon Dioxide) of the soil bore samples ranged from 82.4 (GW05-0.2) to 99.7 % (GW06-1.0)

There was no discernible difference in soil bore and surface soil metal results.

PFASs

Detectable concentrations (>laboratory LOR) were only reported in the shallow soil samples collected (SS1 to SS6) where total PFAS concentrations ranged from 0.001 (SS6) to 0.0616 mg/kg (SS3). All measured concentrations of PFASs in soils were below the adopted screening criteria.

4.2 Groundwater

4.2.1 Field observations and parameters

During drilling of the soil boreholes, groundwater was encountered at depths ranging from 1.5 to 2.7 mbgl.

Groundwater field physicochemical parameters (i.e. temperature, DO, pH, ORP and EC) were recorded during the sampling process and results recorded on field purging sheets, which are presented in Appendix D. The groundwater field physicochemical results are also presented in Table 3 in Appendix F, and are summarised as follows:

- The groundwater pH results ranged between pH 4.7 (GW03) to pH 5.73 (GW04) indicating acidic groundwater conditions
- Field EC measurements indicated fresh conditions, ranging from 92.2 µS/cm (GW06) to 710 µS/cm (GW05)

4.2.2 Analytical results

The tabulated analytical results of groundwater samples are provided in Appendix F, and are summarised in the following sections.

Physico-chemical parameters

- TDS results of the groundwater samples were generally consistent with field EC measurements, and ranged from 124 mg/L (GW04) to 2080 mg/L (GW05).
- The major ion results were consistent with TDS results, where higher TDS results are accompanied with greater chloride, magnesium and sodium concentrations.

PFASs

Five out of six groundwater samples reported concentrations of PFASs less than laboratory LOR.

The sample from GW06 reported detectable levels of PFASs, with total PFAS reported at 0.23 µg/L. Detectable PFASs included PFOS, PFOA, PFHxS and PFHxA. One groundwater sample (GW06) contained a PFOS & PFHxS (sum) result (0.11 µg/L) which exceeded the adopted FSANZ drinking water criteria (0.07 µg/L).

4.2.3 Groundwater levels and flow direction

Standing water levels (SWL) of the groundwater monitoring wells during this GME ranged between 0.905 m (GW06) and 2.716 m bToC (GW02).

All new monitoring wells (GW01 to GW06) were surveyed to m AHD. The survey results were used to calculate groundwater elevations at each monitoring well during gauging. The groundwater elevations are summarised in Appendix D. Groundwater elevations were used for the preparation of an inferred groundwater contour plan (Figure 3 in Appendix A).

The surveyed groundwater elevations were calculated to be between 0.579 (GW02) and 2.356 mAHD (GW06). Based on the groundwater elevations, groundwater on the north eastern portions of the site appears to flow towards the Pacific Ocean, while groundwater on the western portion appears to flow towards the north-west (Wallum Health Conservation Area) and the southern portion of the site appears to flow towards the south (Creek that runs into Paynter River/Maroochy River).

4.3 Surface water

4.3.1 Field observations and parameters

The surface water samples (SW01 – SW04) collected from the open drains were typically pale yellow, with low turbidity and suspended solids.

Field physico-chemical measurements indicated the following:

- pH readings of the surface water samples ranged between pH 4.03 (SW01) and pH 6.28 (SW04), indicating a slight acidic to acidic environment.
- Field EC measurements of the surface water at SW01 (364.1 µS/cm) and SW02 (423.7 µS/cm) were fresh, while surface water samples SW03 (4574 µS/cm) and SW04 (13,329 µS/cm) were brackish to saline.

4.3.2 Analytical results

Four surface water samples were analysed by the primary lab for the extended PFASs suite.

Physico-chemical parameters

- TDS results of the surface water samples were generally consistent with field EC measurements, ranged from 177 mg/L (SW01) to 7920 mg/L (SW04).
- Elevated TDS results were generally accompanied with relatively high sodium, calcium, magnesium, sulfate and chloride results.

PFASs

- Surface water samples have reported PFAS results less than laboratory LOR, except for SW03 where detectable PFOS and PFOA were reported.
- The LORs for PFOS & PFHxS(sum) and PFOA (0.01 µg/L) were greater than the adopted HISL for fish consumption (freshwater and marine water) and consequently all results are reported as above the adopted PFOS guideline level.
- All results were below the EISL (toxicity effects in aquatic organisms) and the FSANZ recreational water guideline criteria.

5. Quality assurance and quality control

A summary of the Quality Assurance and Quality Control (QA/QC) Data Quality Indicators (DQIs) used for the Preliminary Sampling and an assessment of the compliance of the data set with these QA/QC DQIs is provided in Table 10. Appendix G of this report contains further details of the QA/QC assessment program.

Table 10 Summary of QA/QC Compliance

Item	Objective	Reference	Summary of Results	Compliance
Comparison of field and analytical data	Agreement between visual and olfactory evidence with laboratory results		Field observations correspond with the laboratory results	Yes
Calibration of field instruments	Meet calibration specifications	AS4482.1-2005	Calibration certificates included Refer to Appendix I	Yes
Chain of Custody documentation	Completed		Completed in full Refer to Appendix H	Yes
Sample analysis and extraction holding times	Comply with holding times	AS4482.1-2005/NEPM (2013)	All except pH and TDS in surface water samples due to short holding times. Refer to Appendix G	Yes
Sample Preservation	Samples are collected in appropriately preserved containers		All criteria met	Yes
Analysis of intra-laboratory duplicate samples	1 for every 20 samples RPD 30% - 50%	AS4482.1-2005	Refer to Appendix G	Yes
Analysis of inter-laboratory duplicate samples	1 for every 20 samples RPD 30% - 50%	AS4482.1-2005	Refer to Appendix G	Yes. Some exceedances due to sample heterogeneity and different analytical machinery/ method used between the two laboratories
Analysis of laboratory method blanks	No contamination of blanks	NEPM (2013)	All analytes were less than the laboratory LOR for ALS	Yes

Item	Objective	Reference	Summary of Results	Compliance
Analysis of matrix and laboratory control spikes	Recoveries within the laboratory specified recovery limits	NEPM (2013)	Refer to Appendix G	Yes
Analysis of laboratory surrogates	No surrogate recovery outliers	NEPM (2013)	Refer to Appendix G	Yes.
Analysis of laboratory duplicates	Frequencies and Relative Percent Differences (RPDs) within guideline and internal laboratory limits	NEPM (2013)	Refer to Appendix G	Yes

Based on the field and laboratory QA/QC program undertaken, the results indicate that the data was considered to be reasonable and of sufficient quality to meet the data quality objectives for this investigation.

6. Discussion

6.1 Summary of results

The PFAS results reported were either less than laboratory LOR or at low detectable levels. The highest PFAS concentrations were reported at the former fire station area (surface soil SS3 and groundwater well GW06).

The PFAS concentrations in the surface water samples were below the LOR, excluding SW03 which is located downstream from the current fire station.

6.2 Sources

Primary potential sources of PFASs include the current and former fire station. Other sources/uses may include previous training or releases of AFFF due to spills or crash incidents in other parts of the airport (GHD, 2016a).

With the cessation of use of PFAS-containing AFFF, the primary source has been removed. Secondary sources of PFASs remaining at the site include contaminated infrastructure (e.g. concrete pads and drains) as well as residual soil, sediment and groundwater contamination.

Based on the results, the secondary sources of PFAS on site may include the following:

- Area in front of the former fire station impacted by PFAS due to historical spills or training
- Drainage line in front of the new fire station due to historical AFFF spills

These areas may act as an ongoing secondary source of PFASs contamination to both drains and groundwater.

6.3 Migration

A summary of the PFASs (and their carbon chain length) found in each media analysed is provided in Table 11.

Table 11 Detectable PFASs in various media at the SCA

Soil - surface	C#[3]	Groundwater	C#	Surface water	C#
PFHxA	5	PFHxS	6	PFOA	7
PFPeA	5	PFHxA	6	PFOS	8
PFHxA	6	PFOA	7		
PFHxS	6	PFOS	8		
PFHpA	6				
PFOA	7				
PFOS	8				
8:2 FtS	8				
PFNA	8				
FOSA	8				
PFDA	9				
PFUnDA	10				
PFDS	10				
10:2 FTS	10				
PFDoDA	11				
PFTrDA	12				

6.3.1 Soil to groundwater

The PFASs present in surface soil samples (refer to Table 11) ranged from short (five perfluorinated carbons) to long chain (12 perfluorinated carbons), with PFOS being the dominant species present. This is consistent with a PFOS-dominant AFFF product. The surface samples were collected close to the fire station building and at areas where AFFF was known to have been previously released.

PFASs were not detected in any of the soil samples collected from GW01 to GW06. However, low levels of PFAS were reported in one of the groundwater sample from GW06, near the former fire station, comprising short perfluorinated carbon species (six to eight perfluorinated carbons). This suggests some PFAS contamination resulted from historical activities at the former fire station. The lack of PFASs reported in the soil samples from GW06 may be due to changes in landscape and development at the area over the years (GHD, 2016a).

[3] C# only accounts for the number of perfluorinated carbons in the PFAS

The lack of the longer chain PFASs in the groundwater sample from GW06 may reflect two properties of PFASs:

- Longer chain PFASs have a greater potential to sorb readily to soil particles than shorter chain compounds
- Longer chain PFASs have lower solubilities than shorter chain compounds

PFASs have been shown to sorb readily to organic material in an aquifer. Analysis of TOC was conducted to assess the relationship between PFASs and TOC. A possible positive relationship was observed in soil samples which indicated surface samples may attenuate PFOS more than deeper soils as these contained, on average, higher TOC than the deeper samples. Some studies have found high silica sand and high iron sand can also serve as good sorption sites for PFASs (Arcadis, 2016). However, no relationships were observed between iron, silica and PFASs. This lack of a clear relationship is likely due to the low organic carbon content of the soils, the competition for the limited available sorption site by other solutes, and the low concentrations of PFASs in soil.

6.3.2 Surface water

Detectable PFASs (PFOS and PFOA) were reported in one of the surface water samples (SW03) collected from the open drains downstream from the current fire station. This is likely to be the residual impact of a historical spill reported in the PSI report (GHD, 2016a). Due to the shallow groundwater levels, interaction between the groundwater and surface water environment is likely. However, due to the absence of PFASs detected in the groundwater well located near the current fire station, the low level of PFAS reported in the surface water is likely migration of PFAS from surface runoff.

6.3.3 Groundwater

One groundwater sample (GW06) contained a PFOS & PFHxS (sum) result (0.11 µg/L) which exceeded the adopted FSANZ drinking water criteria (0.07 µg/L). The migration of PFASs through an aquifer to a receiving water body is a complex process. Attenuation of PFASs migration at the SCA is likely to be controlled predominantly by aquifer properties and tidal influences. Biodegradation is not considered a significant attenuation mechanism, particularly for PFOS and PFOA. Moreover, due to the sandy unconfined aquifer at the site, the hydraulic conductivity of the aquifer is expected to be relatively high.

As discussed above, the sorption capacity of the aquifer may be relatively low at the site, particularly in relation to organic material.

7. Summary

Based on the data reviewed in this study, the following summary is made:

- The primary source (use of AFFF containing PFAS) no longer exists. Secondary sources include residual soil and groundwater contamination, notably at the former fire station and the current fire station.
- Soil results reported PFAS concentrations either below the laboratory LOR or adopted human health and ecological guidelines, indicating that in the areas sampled, soils do not present an unacceptable risk to human health and ecological receptors.
- One groundwater sample GW06 (near old fire station) has reported PFOS & PFHxS (sum) greater than the adopted drinking water criteria. As the site is located in an urbanised setting where council water supply is available, it is unlikely that groundwater onsite is extracted for potable purposes. Therefore, the likelihood of human health exposure via drinking water is considered low.
- Surface water samples reported concentrations of PFASs below the ecological and recreational guidelines. However, it is noted that the HISL for consumption of fish is lower than the laboratory limit of reporting.

Appendix D – Groundwater Gauging and Purging Records

GROUNDWATER PURGING AND SAMPLING FIELD SHEET

PROJECT DETAILS	Borehole ID: GW01
Project Number: 3134249	
Project Name: Sunshine Coast Airport Preliminary Sampling	Sample ID: GW01
Client: ASA	Date: 29/11/2016 Time:08:58
Site: Sunshine Coast Airport	Sampler: B.N
Well Condition (i.e road box, locked etc): Road Box, fine.	Purge Method: Low Flow
Depth to Water Table Pre-purge (from TOC): 1.855	Sample Method: Low Flow
Depth of PSH (from TOC): NA	Casing Type: uPVC Class 18
Depth to Bottom of Casing (BOC) from TOC: 3.1	Well Diameter: 50 mm
Casing Stickup: Monument	Calculated Bore Volume(L): -
Depth to Water Table Post - purge (from TOC): 1.865	QA Collected: -

FIELD PARAMETERS (RECORDED USING *YSI*)

Time	Volume (L)	Depth to Water from TOC(m)	D.O (mg/L)	E.C (us/cm)	pH	Redox (mv)	Temp (^{0}C)	Comments
9:00	0	1.87	0.21	213.4	5.27	-91.3	27.7	Dark Brown, high Turbidity/suspended solids
9:05	0.3	1.87	0.2	161.1	5.11	-86.8	27.6	
9:15	1	1.875	1.51	156.9	5.14	-98.7	27.7	
9:20	2	1.875	2.07	156.5	5.13	-101.7	27.6	
9:25	3	1.874	2.26	155.5	5.13	-103.6	27.6	
9:30	4	1.874	2.32	155.4	5.13	-105.6	27.7	(Sample)
Post Sample Parameters								

Number of Bottles:

Comments: Analysing for VOC and SVOC

Well Volume Calculation (50mm diameter) 3.8xH (H=height of water column)

GROUNDWATER PURGING AND SAMPLING FIELD SHEET

PROJECT DETAILS	Borehole ID: GW02
Project Number: 3134249	
Project Name: Sunshine Coast Airport Preliminary Sampling	Sample ID: GW02

Appendix E – Surface Soil and Surface Water Observation Notes

Surface Soil Samples

Client: Airservices Australia

Project: Sunshine Coast Airport Preliminary Sampling

Job No.: 3134249

Location: Sunshine Coast Airport

Location	Date	Comments
SS1	15/11/2016	Silty Sand, Brown - dark brown, fine sand, no odour, dry, loose
SS2	15/11/2016	Silty Sand, Brown - dark brown, fine sand, no odour, dry, loose
SS3	17/11/2016	Sand, Grey, fine grained, with silt, dry to moist, loose
SS4	17/11/2016	Silty Sand, Grey- brown, fine grained, dry to moist, loose
SS5	16/11/2016	Silty Sand, Dark grey, fine grained, dry, no odour.
SS6	15/11/2016	Sand, Cream - pale grey, fine grained, dry, no odour.

Surface Water Samples

Client: Airservices Australia

Project: Sunshine Coast Airport Preliminary Sampling

Job No.: 3134249

Location: Sunshine Coast Airport

Location	Date / Time	DO (%)	DO (mg/L)	EC (µS/cm)	pH	Redox (ORP or mV)	Temp (^{o}C)	Comments
SW01	15/11/2016 / 14:00	59.3	4.8	364.1	4.03	71.5	28.1	Pale orange - clear, low turbidity/suspended solids, low level of water in drain. No odour.
SW02	15/11/2016 / 14:22	60.5	4.99	423.7	5.76	41.3	29.2	Pale yellow, low turbidity/suspended solids, no odour. Lilies in water, concrete lined drain.
SW03	15/11/2016 / 14:34	58.3	4.75	4574	6.02	47	27.6	Pale yellow, very low turbidity/suspended solids, no odour. Lilies in water
SW04	15/11/2016 / 14:44	56.3	4.53	13329	6.28	45.5	28.4	Pale yellow, low turbidity/suspended solids, no odour.

*RPDs have only been considered where a concentration is greater than 1 times the EQL.
**High RPDs are in bold (Acceptable RPDs for each EQL multiplier range are: 200 (1-10 x EQL); 50 (10-30 x EQL); 50 (> 30 x EQL))
***Interlab Duplicates are matched on a per compound basis as methods vary between laboratories. Any methods in the row header relate to those used in the primary laboratory

*RPDs have only been considered where a concentration is greater than 1 times the EQL.
**High RPDs are in bold (Acceptable RPDs for each EQL multiplier range are: 200 (1-10 x EQL); 50 (10-30 x EQL); 50 (> 30 x EQL))
***Interlab Duplicates are matched on a per compound basis as methods vary between laboratories. Any methods in the row header relate to those used in the primary laboratory

Appendix G – QA/QC

G. Data quality objectives and quality assurance / quality control

G.1 Data quality objectives

The data quality objectives (DQOs) and investigation strategy have been developed using the methodology discussed in NEPM Schedule B (2) *Guideline on Data Collection, Sample Design and Reporting.* The guideline nominates the implementation of the DQO process in Section 5 of AS4482.1-2005. The purpose of the DQO process is to ensure that the data collection activities are focused on collecting the information needed to make decisions, and answering the relevant questions leading up to such decisions.

The Data Quality Objectives (DQOs) establish a framework for contamination investigations which incorporates a seven stepped continuum that defines the problem at the site. A series of stages then optimises the design of the investigation. These are summarised in the Table G-1 below.

Table G-1 Data quality objectives

Step		Description
1	**State the problem to be resolved**	What is the likelihood that PFAS contamination has migrated off-site via groundwater or surface water?
2	**Identify the decision/s to be made**	To address the problem set out in Step 1, the following decisions are required to achieve the task objective and to identify data gaps and additional information that may be required: • What are the potential sources of PFAS contamination at the site? • Do the concentrations of PFAS in the samples collected exceed adopted guideline criteria? • Do the results of the groundwater, surface water and soil sampling and analysis indicate there is a potential for off-site PFAS which has originated from the Maroochydore (Sunshine Coast) Airport?
3	**Identify the inputs to the decision**	To inform the decisions and identify key data gaps and needs, the following information is considered necessary: • The location of potential PFAS contamination sources. • The location of existing groundwater monitoring wells with respect to potential PFAS contamination sources. • Groundwater and surface water flow pathways. • The results of the laboratory analysis of groundwater samples. • The capacity of the aquifer to attenuate migration.
4	**Define the boundaries of the study**	The study boundary comprises groundwater within the upper (unconfined) aquifer and soil and surface water within the on-site areas in the vicinity of the identified potential PFAS sources as shown in Figure 1. Off-site assessment is not proposed.
5	**Develop a decision rule**	The key decision rules are: Are PFASs present at concentrations above laboratory level of reporting (LOR) in boundary wells, soil and in surface water? • If NO – there is less potential for PFAS contamination to migrate off-site and the priority for conducting off-site groundwater investigations may be reduced. • If YES – there is potential for PFAS contamination to migrate off-site and the priority for conducting off-site groundwater investigations is increased. AND:

Step		Description
		Do the concentrations of PFASs in on-site samples exceed the adopted guideline criteria? • If YES – groundwater and surface water off-site is more likely to be contaminated and the priority for conducting off-site groundwater investigations is increased. • If NO – groundwater and surface water *off-site* is less likely to be contaminated and the priority for conducting off-site groundwater investigations may be reduced.
6	**Specify the tolerable limits on decision errors**	A detailed assessment of potential for sampling and measurement errors will be undertaken based on investigation scope, methodology and results. Data quality will be assessed as detailed in Schedules B2 and B3 of the ASC NEPM. Implications for data quality with respect to the task objective will be identified and discussed. Due to the margin of error associated with analytical methods, any results close to the threshold (within the margin of error either over or under) are more likely to be incorrectly considered either "contaminated" or "uncontaminated". As targeted samples are to be collected as part of a judgemental approach, greater confidence in results will be achieved through knowledge of the site and the likely location of PFAS sources. As such, the following tolerable limits on decision making are proposed for targeted sampling locations: • For results *within* the margin of error (either above or below the threshold) the initial classification would be considered valid (unless for a chemical not considered to be a contaminant of potential concern). • Any results *above* the threshold would require further investigation and delineation to determine the size of the impact identified.
7	**Optimise the design for obtaining the data**	The sample design was optimised through: • Identification of potential PFAS sources from existing information and investigations conducted by others. • A preliminary and high level review of the likely hydraulic characteristics of the upper aquifer to estimate the groundwater flow direction and seepage velocities at various locations of the site. • A review of the surface water pathways across and leaving the site. • Installation of targeted monitoring wells. • Collection of surface water samples. • Collection of soil samples from potentially impacted areas. Soils may have the potential to runoff into surface water drains in periods of high rainfall or inundation. • Appropriate laboratory analysis methodologies. • Evaluation and interpretation of results with respect to relevant guidelines.

G.2 Field QA/QC

A series of QA/QC procedures were implemented for the field investigation works, which included:

- Collection of QC Samples
- Use of standard sampling procedures
- Use of standard field sampling forms, including Chain of Custodies (COCs)
- Documenting the calibration and use of field equipment.

All field works were conducted by a GHD environmental scientist in accordance with GHD's *Standard Field Operating Procedures* (SFOP).

G.2.1 QA/QC sampling

Field QA/QC samples were collected and analysed. Field QC sampling was conducted in reference to AS 4482.1: 2005 and NEPM 2013 Schedule B (3) requirements and included the analyses of the following types of samples in Table G-2.

Table G-2 Field QA/QC sample details

Field QA/QC sample type	Details
Intra-Laboratory Duplicate (Blind)	Comprise a single sample that is divided into two separate sampling containers. Both samples are sent anonymously to the primary project laboratory. Blind duplicates provide an indication of the analytical precision of the laboratory, but are inherently influenced by other factors such as sampling techniques and sample media heterogeneity.
Inter-Laboratory Duplicate (Split)	Inter-Laboratory Duplicate (Split) samples are two separate samples collected at the same location and analysed by two separate laboratories to determine the analytical proficiency of the primary laboratory.

GHD adopts the AS4482.1 acceptance criteria of 30% and 50% RPD for field duplicates of inorganics and organics, respectively. Blind duplicate and split samples should have RPDs less than the criteria in each instance. However, it is noted that the criteria will not always be achieved, particularly in heterogeneous materials, or at low analyte concentrations.

In the instance where samples and their corresponding duplicates have concentrations of target analytes less than the laboratory LOR, no quantitative comparison can be carried out and therefore the RPD is undefined. This is also the case for situations where the sample result is less than ten times the laboratory LOR.

Duplicate and split sample results and Relative Percentage Difference (RPD) calculations are presented in Appendix F.

G.2.2 Sample handling and preservation

All soil samples were collected by hand, using single use nitrile gloves between each sample, and placed directly into pre-treated laboratory supplied jars and bags. The samples were placed immediately into a chilled esky for storage while on site and upon completion of site works the sealed esky was delivered, via courier, to the laboratory.

Groundwater samples were collected using disposable equipment and transferred to the laboratory-supplied applicable sample bottles. Surface water samples were collected using laboratory supplied applicable sample bottles. Samples were placed directly into the chilled esky and delivered upon return from site to the laboratory.

All samples were received intact as per the Sample Receipt Notification (included in Appendix H).

G.2.3 Holding Times

Most of the samples were analysed within the laboratory recommended holding times, except for the pH and TDS of surface water samples, where pH was overdue by 7 days, and TDS by 2 days. This is due to the short holding times of the analyte.

G.2.3 Chain of custody

Unique Chain of Custody documentation and distinct batch numbers accompany all sample batches. This documentation is included in Appendix H.

G.3 Laboratory QA/QC

The laboratories subcontracted by GHD to analyse samples (ALS and Eurofins MGT) are certified by the NATA for the required analysis. NATA certification provides for laboratory QA procedures to be in place and to be carried out on an on-going basis.

As part of the NATA requirements, the laboratories carried out and reported analysis of laboratory quality control samples, such as:

- Duplicate samples (the same sample analysed more than once)
- Blanks (containing none of the analytes to be analysed)
- Spiked samples (containing known additions of the analytes to appropriate matrices)
- Standard samples (samples containing known concentrations of the analytes - also known as reference standards).

G.3.1 Laboratory QA/QC procedures

As part of NATA requirements, the laboratories incorporated a range of QA methods to ensure accuracy of data. This includes the analyses of internal laboratory QC samples, details of which have been provided in Table G-3.

Table G-3 Laboratory QC sample details

Laboratory QA/QC sample	Details
Laboratory (Method) Blank	Usually an organic or aqueous solution that is as free as possible of analytes of interest to which is added all the reagents, in the same volume, as used in the preparation and subsequent analysis of the samples. The reagent blank is carried through the complete sample preparation procedure and contains the same reagent concentrations in the final solution as in the sample solution used for analysis. The reagent blank is used to correct for possible contamination resulting from the preparation or processing of the sample.
Laboratory Control Sample	A reference standard of known concentration is analysed along with a batch of samples. The Laboratory Control Sample provides an indication of the analytical accuracy and the precision of the test method and is used for inorganic analyses.
Laboratory Spike	An authentic field sample is 'spiked' by adding an aliquot of known concentration of the target analyte(s) prior to sample extraction and analysis. A spike documents the effect of the sample matrix on the extraction and analytical techniques. Spiked samples will be analysed for each batch where samples are analysed for organic chemicals of concern.
Surrogate Samples	These are organic compounds which are similar to the analyte of interest in terms of chemical composition, extractability, and chromatographic conditions (retention time), but which are not normally found in environmental samples. These surrogate compounds are 'spiked' into blanks, standards and samples submitted for organic analyses by gas-chromatographic techniques prior to sample extraction. Surrogate Standard / Spikes provide a means of checking that no gross errors have occurred during any stage of the test method leading to significant analyte loss.

Laboratory QA/QC sample	Details
Laboratory Duplicates	The analytical laboratory collects duplicate sub samples from one sample submitted for analytical testing at a rate equivalent to one in twenty samples per analytical batch, or one sample per batch if less than twenty samples are analysed in a batch. A laboratory duplicate provides data on the analytical precision and reproducibility of the test result. The precision of analysis performed by the laboratory is determined by the calculation of the relative percent difference (RPD). The RPD is calculated based on a comparison of an intra-laboratory split of the sample material with results representing the percent difference between the two sample concentrations for a specific contaminant. The RPD is calculated using the following formula: $RPD(\%) = \frac{\lvert C_o - C_d \rvert}{C_o + C_d} \times 200$ Where Co = Analyte concentration of the original sample Cd = Analyte concentration of the duplicate sample

The laboratory is required to provide this information to GHD. The individual analytical laboratories conduct an assessment of the laboratory QC program internally; however, the results are also reviewed and assessed by GHD.

G.4 Field QC results

The field QC results discussion below considered all the soil, groundwater and surface water samples collected as part of the investigation stage for the SCA site.

G.4.1 Soil

A total of 38 soil samples were collected and 20 were analysed during the site sampling program. Three soil QC samples (including two intra-laboratory and one inter-laboratory samples) were collected and analysed as part of the field work program. The target frequency for collection and analysis of field QC samples is 1 in 20 (5%). In this instance, this frequency was achieved for analysis (8%) and collection (15%).

RPDs were calculated between the duplicate results. Field QC samples collected are provided in the Table G-4.

Table G-4 Analysed field QC samples for soil

QA sample ID	QA/QC sample	Primary sample
QA-01	Intra-laboratory	SS1
QA-04	Intra-laboratory	GW06-1.0
QA-05	Inter-laboratory	GW02-0.8

All RPD results were within the adopted data quality objectives.

G.4.2 Groundwater/surface water

A total of 10 water samples (groundwater and surface water) were submitted as part of the groundwater and surface water investigations at the SCA.

Two field duplicate (intra-laboratory) and two split (inter-laboratory) samples were collected and analysed as part of the investigation. The target frequency for analysis of field QC samples is 1 in 20 (5%). In this instance, this frequency was achieved for analysis (30%).

The field QC sample collected are provided in the Table G-6.

Table G-5 Analysed field QC samples for groundwater/surface water

QA sample	QA/QC sample	Primary sample
QA-01	Intra-laboratory	GW06
QA-02	Inter-laboratory	GW06
QA-03	Intra-laboratory	SW04

Table G-6 RPD results outside of data quality limits

Primary & QA Pair	Analyte	Primary (µg/L)	QA/QC (µg/L)	RPD (%)
GW06 & QA-02	PFOS	0.08	0.2	86

The primary and secondary laboratory results of the PFAS had different LORs, which could be due to the different methods and analytical equipment used for the analysis at both laboratories. As most PFAS results RPD are within the acceptable limits and both set of results were less than adopted criteria, the results are considered to be valid for this assessment.

G.5 Laboratory program

The NATA certified laboratories utilised for this assessment (ALS and Eurofins MGT) undertook their own internal quality assurance and quality control procedures for sample analysis. GHD has reviewed the internal laboratory control data provided within the laboratory reports, which are provided in Appendix H.

All of the internal laboratory QA QC analysis, including method blanks, control samples, laboratory spikes and surrogates spikes was within the data quality criteria, no outlier was reported for the internal laboratory QA QC reports.

G.6 Overall assessment of data quality

With the exception of the non-conformances listed above, the majority of the GHD QA/QC parameters were within the specified requirements, therefore the data is considered to be valid and of sufficient quality for the purposes of this Preliminary Sampling report.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **22/11/16: SRN has been resent to acknowledge remove the major cations, total mercury, total metals from GW03-3.0 and request the major cations, total mercury and total metals to be analysed on GW03-2.0. For any further information regarding these adjustments please contact client services at ALSEnviro.Brisbane@alsglobal.com.**
- **Please be advised that sample "GW05-3.5" was not received at the laboratory (denoted SNR on the scanned COC).**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- **PFAS analysis will be conducted by ALS Environmental, Sydney, NATA accreditation no. 825, Site No. 10911 (Micro site no. 14913).**
- **Silica analysis will be conducted by ALS Minerals, Brisbane, NATA accreditation no. 825, Site No. 818.**
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (14 days), Solid (60 days) from date of completion of work order.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default to 15:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory for processing purposes and will be shown bracketed without a time component.

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Andrew Epps	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
Edwandy Fadjar	Organic Coordinator	Sydney Inorganics, Smithfield, NSW
Greg Vogel	Laboratory Manager	Brisbane Inorganics, Stafford, QLD
Lana Nguyen	Senior LCMS Chemist	Sydney Organics, Smithfield, NSW
Satishkumar Trivedi	Acid Sulfate Soils Supervisor	Brisbane Acid Sulphate Soils, Stafford, QLD

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP231X: Particular samples required dilution prior to extraction due to matrix interferences. LOR values have been adjusted accordingly.

Test Method: AS1289.3.6.3 2003

Soil Particle Density (<2.36mm) 2.67 g/cm3

Analysed: 23-Nov-16

Limit of Reporting: 1%

Dispersion Method Shaker

Hydrometer Type ASTM E100

NATA Accreditation: 825 Site: Brisbane
This document is issued in accordance with NATA's accreditation requirements. Accredited for compliance with ISO/IEC 17025. This document shall not be reproduced, except in full.

QUALITY CONTROL REPORT

Work Order	: **EB1627495**	Page	: 1 of 13
Client	: **GHD PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: MS THERESE HAMMOND	Contact	: Vanessa Turnbull
Address	: GPO BOX 668 BRISBANE QLD, AUSTRALIA 4001	Address	: 2 Byth Street Stafford QLD Australia 4053
Telephone	: +61 03 8687 8000	Telephone	: +61-7-3243 7222
Project	: Sunshine Coast Airport PSI	Date Samples Received	: 18-Nov-2016
Order number	: 3134249	Date Analysis Commenced	: 21-Nov-2016
C-O-C number	: ----	Issue Date	: 29-Nov-2016
Sampler	: BERNICE NG		
Site	: ----		
Quote number	: ----		
No. of samples received	: 50		
No. of samples analysed	: 27		

ilac-MRA NATA
Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Andrew Epps	Senior Inorganic Chemist	Brisbane Inorganics, Stafford, QLD
Edwandy Fadjar	Organic Coordinator	Sydney Inorganics, Smithfield, NSW
Greg Vogel	Laboratory Manager	Brisbane Inorganics, Stafford, QLD
Lana Nguyen	Senior LCMS Chemist	Sydney Organics, Smithfield, NSW
Satishkumar Trivedi	Acid Sulfate Soils Supervisor	Brisbane Acid Sulphate Soils, Stafford, QLD

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB1627495**	Page	: 1 of 12
Client	: **GHD PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: MS THERESE HAMMOND	Telephone	: +61-7-3243 7222
Project	: Sunshine Coast Airport PSI	Date Samples Received	: 18-Nov-2016
Site	: ----	Issue Date	: 29-Nov-2016
Sampler	: BERNICE NG	No. of samples received	: 50
Order number	: 3134249	No. of samples analysed	: 27

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **Analysis Holding Time Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Outliers : Analysis Holding Time Compliance

Matrix: **WATER**

Method / Container / Client Sample ID(s)	Extraction / Preparation			Analysis		
	Date extracted	Due for extraction	Days overdue	Date analysed	Due for analysis	Days overdue
EA005P: pH by PC Titrator						
Clear Plastic Bottle - Natural						
SW01, SW02, SW03, SW04	----	----	----	22-Nov-2016	15-Nov-2016	**7**

Clear Plastic Bottle - Natural						
SW01, SW02, SW03, SW04	----	----	----	24-Nov-2016	22-Nov-2016	**2**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055-103	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 103-105 degrees C. This method is compliant with NEPM (2013) Schedule B(3) Section 7.1 and Table 1 (14 day holding time).
Particle Size Analysis by Hydrometer	EA150H	SOIL	Particle Size Analysis by Hydrometer according to AS1289.3.6.3 - 2003
Soil Particle Density	EA152	SOIL	Soil Particle Density by AS 1289.3.5.1-2006 : Methods of testing soils for engineering purposes - Soil classification tests - Determination of the soil particle density of a soil - Standard method
Major Cations by ICPAES - Total	ED093T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010 (ICPAES) Major cations are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM (2013) Schedule B(3)
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM (2013) Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to AS 3550, APHA 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (2013) Schedule B(3)
Total Organic Carbon	EP003	SOIL	In house C-IR17. Dried and pulverised sample is reacted with acid to remove inorganic Carbonates, then combusted in a LECO furnace in the presence of strong oxidants / catalysts. The evolved (Organic) Carbon (as CO2) is automaticaly measured by infra-red detector.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-House. A portion of soil is extracted with MTBE. The extract is taken to dryness, made up in mobile phase. Analysis is by LC/MSMS, ESI Negative Mode using MRM. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers.
pH by PC Titrator	EA005-P	WATER	In house: Referenced to APHA 4500 H+ B. This procedure determines pH of water samples by automated ISE. This method is compliant with NEPM (2013) Schedule B(3)
Total Dissolved Solids (High Level)	EA015H	WATER	In house: Referenced to APHA 2540C. A gravimetric procedure that determines the amount of `filterable` residue in an aqueous sample. A well-mixed sample is filtered through a glass fibre filter (1.2um). The filtrate is evaporated to dryness and dried to constant weight at 180+/-5C. This method is compliant with NEPM (2013) Schedule B(3)
Alkalinity by PC Titrator	ED037-P	WATER	In house: Referenced to APHA 2320 B This procedure determines alkalinity by automated measurement (e.g. PC Titrate) using pH 4.5 for indicating the total alkalinity end-point. This method is compliant with NEPM (2013) Schedule B(3)
Sulfate (Turbidimetric) as SO4 2- by Discrete Analyser	ED041G	WATER	In house: Referenced to APHA 4500-SO4. Dissolved sulfate is determined in a 0.45um filtered sample. Sulfate ions are converted to a barium sulfate suspension in an acetic acid medium with barium chloride. Light absorbance of the BaSO4 suspension is measured by a photometer and the SO4-2 concentration is determined by comparison of the reading with a standard curve. This method is compliant with NEPM (2013) Schedule B(3)

Analytical Methods	Method	Matrix	Method Descriptions
Chloride by Discrete Analyser	ED045G	WATER	In house: Referenced to APHA 4500 Cl - G.The thiocyanate ion is liberated from mercuric thiocyanate through sequestration of mercury by the chloride ion to form non-ionised mercuric chloride.in the presence of ferric ions the librated thiocynate forms highly-coloured ferric thiocynate which is measured at 480 nm APHA 21st edition seal method 2 017-1-L april 2003
Major Cations - Dissolved	ED093F	WATER	In house: Referenced to APHA 3120 and 3125; USEPA SW 846 - 6010 and 6020; Cations are determined by either ICP-AES or ICP-MS techniques. This method is compliant with NEPM (2013) Schedule B(3) Sodium Adsorption Ratio is calculated from Ca, Mg and Na which determined by ALS in house method QWI-EN/ED093F. This method is compliant with NEPM (2013) Schedule B(3) Hardness parameters are calculated based on APHA 2340 B. This method is compliant with NEPM (2013) Schedule B(3)
Ionic Balance by PCT DA and Turbi SO4 DA	EN055 - PG	WATER	In house: Referenced to APHA 1030F. This method is compliant with NEPM (2013) Schedule B(3)
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In house: Direct injection analysis of fresh waters after dilution (1:1) with methanol. Analysis by LC-Electrospray-MS-MS, Negative Mode using MRM. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers.

Preparation Methods	Method	Matrix	Method Descriptions
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM (2013) Schedule B(3) (Method 202)
Sample Extraction for PFAS	EP231-PR	SOIL	In house
Dry and Pulverise (up to 100g)	GEO30	SOIL	#

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Samples requiring Cation Exchange Capacity analysis have been assigned pH and Electrical Conductivity analysis in order to determine the appropriate CEC method, as per Raymont and Lyons (2011).**
- **The samples in this work order have been re-batched from EB1627495**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (14 days), Solid (60 days) from date of completion of work order.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Any sample identifications that cannot be displayed entirely in the analysis summary table will be listed below.

EB1630161-001 : [16-Nov-2016] : GW01-3.1 - EB1627495-017
EB1630161-002 : [16-Nov-2016] : GW02-0.8 - EB1627495-021
EB1630161-003 : [16-Nov-2016] : GW04-1.0 - EB1627495-041
EB1630161-004 : [16-Nov-2016] : GW06-1.0 - EB1627495-047

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Matrix: **SOIL**

Greg Vogel	Laboratory Manager	Brisbane Inorganics, Stafford, QLD

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- ED007 Exchangeable Cations (Calcium/Magnesium Ratio): Results could not be calculated for samples EB1630161-004 and 006 as the required Calcium or Magnesium analytes were less than reportable limits.
- ED007 Exchangeable Cations (Magnesium/Potassium Ratio): Results could not be calculated for samples EB1630161-001-004 and 006 as the required Magnesium or Potassium analytes were less than reportable limits.
- 28/12/16: CEC methods assigned according to pH/EC decision tree.
- **The samples in this work order have been re-batched from EB1627495**
- ED007 and ED008: When Exchangeable Al is reported from these methods, it should be noted that Rayment & Lyons (2011) suggests Exchange Acidity by 1M KCl - Method 15G1 (ED005) is a more suitable method for the determination of exchange acidity (H+ + Al3+).

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- **No Matrix Spike (MS) or Matrix Spike Duplicate (MSD) Results are required to be reported.**

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB1630161**	Page	: 1 of 6

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **Analysis Holding Time Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
pH (1:5)	EA002	SOIL	In house: Referenced to APHA 4500H+. pH is determined on soil samples after a 1:5 soil/water leach. This method is compliant with NEPM (2013) Schedule B(3) (Method 103)
Electrical Conductivity (1:5)	EA010	SOIL	In house: Referenced to APHA 2510. Conductivity is determined on soil samples using a 1:5 soil/water leach. This method is compliant with NEPM (2013) Schedule B(3) (Method 104)
Moisture Content	EA055-103	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 103-105 degrees C. This method is compliant with NEPM (2013) Schedule B(3) Section 7.1 and Table 1 (14 day holding time).
Exchange Acidity by 1M Potassium Chloride	ED005	SOIL	In house: referenced to Rayment and Lyons, (2011), method 15G1. This method is unsuitable for near neutral and alkaline soils. NATA accreditation does not cover performance of this service.
Exchangeable Cations	ED007	SOIL	In house: Referenced to Rayment & Lyons (2011) Method 15A1. Cations are exchanged from the sample by contact with Ammonium Chloride. They are then quantitated in the final solution by ICPAES and reported as meq/100g of original soil. This method is compliant with NEPM (2013) Schedule B(3) (Method 301)
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM (2013) Schedule B(3)

Preparation Methods	Method	Matrix	Method Descriptions
Exchangeable Cations Preparation Method	ED007PR	SOIL	In house: Referenced to Rayment & Higginson (1992) method 15A1. A 1M NH4Cl extraction by end over end tumbling at a ratio of 1:20. There is no pretreatment for soluble salts. Extracts can be run by ICP for cations.
1:5 solid / water leach for soluble analytes	EN34	SOIL	10 g of soil is mixed with 50 mL of distilled water and tumbled end over end for 1 hour. Water soluble salts are leached from the soil by the continuous suspension. Samples are settled and the water filtered off for analysis.
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM (2013) Schedule B(3) (Method 202)

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- ***30/11/16*: SRN has been resent to acknowledge cancellation of pH analysis per email request received from Bernice Ng on 30/11/16.**
- Discounted Package Prices apply only when specific ALS Group Codes ('W', 'S', 'NT' suites) are referenced on COCs.
- **PFAS analysis will be conducted by ALS Environmental, Sydney, NATA accreditation no. 825, Site No. 10911 (Micro site no. 14913).**
- Sample 'QA-02' has been forwarded to Eurofins as per Chain of Custody request
- Please direct any turn around / technical queries to the laboratory contact designated above.
- Sample Disposal - Aqueous (14 days), Solid (60 days) from date of completion of work order.
- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default to 15:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory for processing purposes and will be shown bracketed without a time component.

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Greg Vogel	Laboratory Manager	Brisbane Inorganics, Stafford, QLD
Lana Nguyen	Senior LCMS Chemist	Sydney Organics, Smithfield, NSW

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- ED041G (Sulfate as SO4 2-): Samples were diluted due to matrix interference. LOR adjusted accordingly.
- TDS by method EA-015 may bias high due to the presence of fine particulate matter, which may pass through the prescribed GF/C paper.

Sampler	: BERNICE NG		
Site	: ----		
Quote number	: ----		
No. of samples received	: 7		
No. of samples analysed	: 7		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Greg Vogel	Laboratory Manager	Brisbane Inorganics, Stafford, QLD
Lana Nguyen	Senior LCMS Chemist	Sydney Organics, Smithfield, NSW

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **WATER**

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EB1628319**	Page	: 1 of 5
Client	: **GHD PTY LTD**	Laboratory	: Environmental Division Brisbane
Contact	: MS THERESE HAMMOND	Telephone	: +61-7-3243 7222
Project	: 313424900 Sunshine Coast airport PFAS groundwater	Date Samples Received	: 30-Nov-2016
Site	: ----	Issue Date	: 07-Dec-2016
Sampler	: BERNICE NG	No. of samples received	: 7
Order number	: 313424900	No. of samples analysed	: 7

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Total Dissolved Solids (High Level)	EA015H	WATER	In house: Referenced to APHA 2540C. A gravimetric procedure that determines the amount of `filterable` residue in an aqueous sample. A well-mixed sample is filtered through a glass fibre filter (1.2um). The filtrate is evaporated to dryness and dried to constant weight at 180+/-5C. This method is compliant with NEPM (2013) Schedule B(3)
Alkalinity by PC Titrator	ED037-P	WATER	In house: Referenced to APHA 2320 B This procedure determines alkalinity by automated measurement (e.g. PC Titrate) using pH 4.5 for indicating the total alkalinity end-point. This method is compliant with NEPM (2013) Schedule B(3)
Sulfate (Turbidimetric) as SO4 2- by Discrete Analyser	ED041G	WATER	In house: Referenced to APHA 4500-SO4. Dissolved sulfate is determined in a 0.45um filtered sample. Sulfate ions are converted to a barium sulfate suspension in an acetic acid medium with barium chloride. Light absorbance of the BaSO4 suspension is measured by a photometer and the SO4-2 concentration is determined by comparison of the reading with a standard curve. This method is compliant with NEPM (2013) Schedule B(3)
Chloride by Discrete Analyser	ED045G	WATER	In house: Referenced to APHA 4500 Cl - G.The thiocyanate ion is liberated from mercuric thiocyanate through sequestration of mercury by the chloride ion to form non-ionised mercuric chloride.in the presence of ferric ions the librated thiocynate forms highly-coloured ferric thiocynate which is measured at 480 nm APHA 21st edition seal method 2 017-1-L april 2003
Major Cations - Dissolved	ED093F	WATER	In house: Referenced to APHA 3120 and 3125; USEPA SW 846 - 6010 and 6020; Cations are determined by either ICP-AES or ICP-MS techniques. This method is compliant with NEPM (2013) Schedule B(3) Sodium Adsorption Ratio is calculated from Ca, Mg and Na which determined by ALS in house method QWI-EN/ED093F. This method is compliant with NEPM (2013) Schedule B(3) Hardness parameters are calculated based on APHA 2340 B. This method is compliant with NEPM (2013) Schedule B(3)
Ionic Balance by PCT DA and Turbi SO4 DA	EN055 - PG	WATER	In house: Referenced to APHA 1030F. This method is compliant with NEPM (2013) Schedule B(3)
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In house: Direct injection analysis of fresh waters after dilution (1:1) with methanol. Analysis by LC-Electrospray-MS-MS, Negative Mode using MRM. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers.

Sample information

☑ A detailed list of analytes logged into our LIMS, is included in the attached summary table.

☑ Sample Temperature of a random sample selected from the batch as recorded by Eurofins | mgt Sample Receipt : 10 degrees Celsius.

☑ All samples have been received as described on the above COC.

☑ COC has been completed correctly.

☑ Attempt to chill was evident.

☑ Appropriately preserved sample containers have been used.

☑ All samples were received in good condition.

☑ Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.

☑ Appropriate sample containers have been used.

☒ Some samples have been subcontracted.

N/A Custody Seals intact (if used).

Contact notes

If you have any questions with respect to these samples please contact:

Mary Makarios on Phone : +61 3 8564 5000 or by e.mail: MaryMakarios@eurofins.com

Results will be delivered electronically via e.mail to Therese. Hammond - Therese.Hammond@ghd.com.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
4. Results are uncorrected for matrix spikes or surrogate recoveries.
5. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
6. Samples were analysed on an 'as received' basis. 7. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per Kilogram

ug/l: micrograms per litre

ppb: Parts per billion

org/100ml: Organisms per 100 millilitres

MPN/100mL: Most Probable Number of organisms per 100 millilitres

mg/l: milligrams per litre

ppm: Parts per million

%: Percentage

NTU: Nephelometric Turbidity Units

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery
CRM	Certified Reference Material - reported as percent recovery
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands. In the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
Batch Duplicate	A second piece of analysis from a sample outside of the clients batch of samples but run within the laboratory batch of analysis.
Batch SPIKE	Spike recovery reported on a sample from outside of the clients batch of samples but run within the laboratory batch of analysis.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 50-150%-Phenols & PFASs 20-130%

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Test	Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code
Method Blank							
Per- and Polyfluorinated Alkyl Substances (PFASs)

Quality Control Analyte Summary Compliance

The table below is the actual occurrence of QC performed on the batch of samples within this report and as defined below

Analysis	Samples Analysed	Laboratory Duplicates Reported	Laboratory Matrix Spikes Reported	Method Blanks Reported	Laboratory Control Samples Reported
Per- and Polyfluorinated Alkyl Substances	1	1	1	1	1
% Moisture	1	1	NA	NA	NA

Quality Control Parameter Frequency Compliance follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure April 2011, Schedule B3, Guideline on Laboratory Analysis of Potentially Contaminated Soils and US EPA SW-846 Chapter 1: 'Quality Control'.

It comprises the following when a laboratory process batch is deemed to consist of up to 20 samples that are similar in terms of matrix and test procedure, and are processed as one unit for QC purposes. If more than 20 samples are being processed, they are considered as more than one batch.

Method blank

One method blank per process batch.

Laboratory duplicate

There should be at least one duplicate per process batch, or two duplicates if the process batch exceeds 10 samples.

Laboratory control sample (LCS)

There should be at least one LCS per process batch.

Matrix spikes

There should be one matrix spike per matrix type per process batch.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Sample Receipt Advice

Company name: **GHD Pty Ltd QLD**

Contact name: Therese. Hammond
Project name: SUNSHINE COAST AIRPORT PFAS GROUNDWATER
Project ID: 313424900
COC number: Not provided
Turn around time: 5 Day
Date/Time received: Dec 1, 2016 12:50 PM
Eurofins | mgt reference: **525887**

Sample information

☑ A detailed list of analytes logged into our LIMS, is included in the attached summary table.

☑ Sample Temperature of a random sample selected from the batch as recorded by Eurofins | mgt Sample Receipt : 7.2 degrees Celsius.

☑ All samples have been received as described on the above COC.

☑ COC has been completed correctly.

☑ Attempt to chill was evident.

☑ Appropriately preserved sample containers have been used.

☑ All samples were received in good condition.

☑ Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.

☑ Appropriate sample containers have been used.

☑ Sample containers for volatile analysis received with zero headspace.

☒ Some samples have been subcontracted.

N/A Custody Seals intact (if used).

Contact notes

If you have any questions with respect to these samples please contact:

Mary Makarios on Phone : +61 3 8564 5000 or by e.mail: MaryMakarios@eurofins.com

Results will be delivered electronically via e.mail to Therese. Hammond - Therese.Hammond@ghd.com.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Per- and Polyfluorinated Alkyl Substances (PFASs)	Brisbane	Dec 01, 2016	14 Day

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
4. Results are uncorrected for matrix spikes or surrogate recoveries.
5. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
6. Samples were analysed on an 'as received' basis. 7. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per Kilogram

ug/l: micrograms per litre

ppb: Parts per billion

org/100ml: Organisms per 100 millilitres

MPN/100mL: Most Probable Number of organisms per 100 millilitres

mg/l: milligrams per litre

ppm: Parts per million

%: Percentage

NTU: Nephelometric Turbidity Units

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery
CRM	Certified Reference Material - reported as percent recovery
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands. In the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
Batch Duplicate	A second piece of analysis from a sample outside of the clients batch of samples but run within the laboratory batch of analysis.
Batch SPIKE	Spike recovery reported on a sample from outside of the clients batch of samples but run within the laboratory batch of analysis.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 50-150%-Phenols & PFASs 20-130%

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Test	Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code

Certificate of Calibration

This is to certify that the above instrument has been calibrated to the following specifications:

Sensor	Serial no	Standard Solutions	Certified	Solution Bottle Number	Instrument Reading
1. D.O		0 ppm		288996	0 ppm
2. Conductivity		2760uS		288772	2760uS
3. pH7		pH 7.00		NL1847/NL1848	pH 7.00
4. pH4		pH 4.00		NJ1809	pH 4.00
5. ORP mV		230.04		123302	230.04
7. Temp °C		21.8		MultiTherm	21.8

Calibrated by: Ricky Kneebone

Calibration date: 14-Nov-16

Next calibration due: 13-May-17
